

Approved

in sixteen Countries

The new Bücker JUNGSMANN Bü 131 B, fitted with a 100 h. p. Hirth motor, is used in fourteen countries for military training and stunt flying. High performances and excellent flying capabilities are obtained by the favourable power/weight ratio, so that "ab initio" as well as aerobatic training can be carried out on the Jungmann. No additional teaching is necessary on taking over the single seat fighter after graduating from the training machine.
